Guest talk „Information Security – A Practical Approach“
Tanja Völk, Algorit GmbH & Co. KG

Information security affects all companies. In the beginning responsibilities have to be defined clearly. Therefore, the management board has to be brought on board and further steps need to be clarified in order to implement information security in companies.

Tanja Völk studied business informatics with the focus on information security at the University of Applied Sciences in Würzburg. Today she is IT Security Consultant at Algorit. She carries out ITQ audits to determine the status quo regarding information security in mid-sized companies. Based on this she creates specific measures to implement information security management. Furthermore, she provides advice to all regards of information security issues, carries out awareness trainings and is external information security officer.

Algorit GmbH & Co. KG was founded in 2007. It started with IT support and today it is partner of Vodafone and Telekom. With appx. 30 employees Algorit provides services in the fields of IT, telecommunications, mobile communications, fixed connections, and information security.
